

## **Science/Topic - Animals and their Habitats**

This half term we're learning about animals and their habitats, including mammals, insects and food chains.

### Activity One

Categorise different animals into their groups, e.g. mammals, birds, insects, reptiles, amphibians - research different animals, find out what group they belong to and record on a table or a chart. We wonder how many animals you can list!

### Activity Two

Research animals and their habitats. Things you could find out are:

- What is a habitat?
- How the animal has adapted to live in its habitat.
- What the animal eats and how it hunts.
- How and where the animal sleeps.
- How they care for their young within the habitat.

Using the information you have found create either a fact file, a poster, a leaflet or a small book.

### Activity Three

Paint or draw a picture of your favourite animal in its habitat. If you feel like a challenge, create a model of that animal in its habitat. Don't forget to include the details you found out about their habitat e.g. a koala would be in a tree surrounded by eucalyptus leaves, a camel would be in the desert surrounded by sand and cacti.
